

Mezz Floors UK

3 Solar PV systems were installed onto Mezz UK's units in Haverhill.

The Challenge

Mezz Floors UK had been exploring ways of becoming a more sustainable and ethical company, Mezz UK looked at alternative energy strategies as a way of lowering their energy bills and reducing their carbon footprint. Mezz Floors UK is a hands-on mezzanine floor construction specialist company. They offer a personal touch when designing and building your flooring system: they get to know you and your company so they can create the best mezzanine floor possible for you.

The Solution

ASG conducted a thorough review of Mezz UK's units and its requirements, We recommended a 3 x 12 kWp Solar PV installation giving them a 36 kWp combined system. The total solution included site survey, system design, District Network Operator (DNO) approvals, Health & Safety compliance, total project management of the installation and electrical services connection.

The Outcome

Mezz UK's solar systems will generate approximately **37,000kW** per annum of clean, free energy across the lifetime of the panels, which is typically 25 years. The systems will save Mezz UK over **£10,000** per annum and will pay for themselves in around **3-4 years**. This will help reduce Mezz UK's reliance on grid power and protect them against future rising energy costs.
